

STRATEGIC BLUEPRINT

Enterprise AI & Data Roadmap 2026

A comprehensive, phased approach to transitioning from fragmented data silos to a production-grade AI ecosystem on the Microsoft Data Stack.

CONFIDENTIAL & PROPRIETARY

Prepared by Groot Analytics Engineering Team

PHASE 1 // FOUNDATION

Fabric-Ready Data Architecture

Establishing the Single Source of Truth

You cannot build reliable AI on top of fragmented, ungoverned data. Phase 1 focuses entirely on establishing a unified architecture. We eliminate data silos by migrating legacy systems into a centralized data lakehouse, applying strict governance policies, and automating ingestion pipelines so data is always fresh, secure, and ready for advanced modeling.

Core Deliverables

- Unified OneLake / Databricks Setup
- Data Governance via Purview
- Automated ELT/ETL Pipelines
- Security & Compliance Guardrails

Target Architecture

Roadmap Progress

PHASE 2 // INTELLIGENCE

Decision Intelligence Engine

Empowering Business Leadership

Before advanced AI, the business needs absolute trust in its core metrics. In Phase 2, we build an interactive, semantic layer on top of your unified data. This layer democratizes data access without compromising security, delivering executive-level Power BI dashboards that update in real-time and provide actionable business intelligence.

Core Deliverables

- Enterprise Semantic Models
- Executive Power BI Dashboards
- Self-Service Analytics Rollout
- Standardization of KPIs

Target Architecture

Roadmap Progress

PHASE 3 // AI FOUNDRY

Production-Grade AI & Copilots

The Final Frontier of Automation

With a rock-solid foundation and trusted metrics, we deploy machine learning models and generative AI. In Phase 3, we build custom Copilots and LLM integrations that converse with your proprietary data. We implement strict MLOps practices to ensure AI deployments are reliable, scalable, and actively driving revenue while reducing operational costs.

Core Deliverables

- Custom Azure OpenAI Solutions
- M365 & Fabric Copilot Integration
- End-to-End MLOps Pipelines
- Predictive Analytics Forecasting
